COMMUNICATIONS - MITTEILUNGEN

RECENT AND CURRENT FIELD STUDIES
OF PRIMATES

In the past five years there has been an enormous increase in the number of field studies on nonhuman primates. The following list is designed to facilitate communication between laboratory and field workers, and to promote coordinated research among field workers.

This list was compiled by I. DEVORE and R. LEE, with suggestions and additions by JOHNT. EMLEN and HIROKI MIZUHARA. In preliminary form it was circulated to all field workers who could be located in March, 1962, and to many of them again in September. The following information is as correct as it was possible for us to obtain, but we know that it contains errors and omissions. We would appreciate receiving corrections and additions; when these have accumulated, an addendum will be sent to *Folia Primatologica*.

IRVEN DEVORE and RICHARD LEE
