On February 22, 2017, the W3C published new recommendations to standardize web annotations. The recommendations describe a standard for reuse of annotations across systems using an extensible JSON-LD format. Annotation on the web can help researchers want to annotate digital objects in the library’s collections. In the library, we work with liaison librarians to provide consultation and development services. In the library, we work with liaison librarians to provide consultation and development services for experimentation and co-curricular pedagogy and collaborate with Archives and Special Collections for the creation of our local digital collections.

**FEDORA 4** A semantic web application and repository specification using JSON-LD, RESTful APIs.

**FEDORA 3x**

**ISLANDORA “WEB ANNOTATION UTILITY MODULE”**...back-end strategy

Create one common annotation content model, in the spirit of the new W3C recommendations for structuring annotation content, taking advantage of the existing Islandora stack, with an eye towards our eventual migration to Fedora 4. Add open-source HTML5 & Flash video player. Islandora media content)

**Annotation as a “Scholarly Primitive”**

Annotation is an activity that crosses disciplinary boundaries and is essential to academic endeavour (and it’s got a long history in analog and digital contexts).

Assignment: Islandora’s WADMCModel content, taking advantage of the existing Islandora stack, with an eye towards our eventual migration to Fedora 4.

**THE FUTURE!**

Create one common annotation content model, in the spirit of the new W3C recommendations for structuring annotation content, taking advantage of the existing Islandora stack, with an eye towards our eventual migration to Fedora 4.
