The spill volume was assumed 100 times that of the actual experiment, in a location with ice conditions similar to those at the FEX2009 site.

- Prediction carried out from 09:00 AM 15 May 09 - 11:00 AM 20 May 09 (GMT+02:00)
- Ice cover 70-90%, so oil moved with ice
- Winds generally 5-10 m/s, peaking at 15-20 m/s (30-40 kts) during May 17-18
- Ice drift up to 100 cm/s during periods of strong winds
