way to a packed surface of shells, pebbles and sherds, many of which are found flat. Under the initial surface the soil became softer. To the south, in the pit dug for a well, we were able to observe our stratigraphy. The layer of grey soil appears to be about 40 cm. thick. Therefore we began by taking a 10 cm. pass across the middle of the room between walls 13, 5, and 1. In the S. W. corner of the room we found a small stone morter face up. Cooling that room are very much in evidence as we dug.

Pits 562 will contain some pottery from the floor dug as Pits 4A and 6.
A piece of pumice is found.
Pottery notes.
The pottery from the "Dumps" (see sketch plan page 108) has been reconsidered. The results are as follows:

Pail 29 L.4 (19.480 grams). The latest sherds, other than the intrusive Tithutherford sherd, are two decorated cups, probably LM II B, (centre page 92). The high proportion of a few shapes make one suspect this group may be largely contemporaneous. A cup attachment is evinced (C-82) as is a cup with a reed pattern (C-81).

Pail 30 L.4: The latest sherds in style are LM II B/III A. The proportion of the occurrence of shapes is approximately the same as Pail 29 L.4. The lyre is represented by a single foot. One sherd has a part of a painted birds head. The cup is the most popular shape, when painted its designs are LM II B (foliate band, Scale). Some between this unit and Pail 29 L.4 might be expected, an LM II style lyre is catalogued (C-65).

Pail 31 L.4: The latest sherds in style are LM II /? LM III A. There is some earlier LM material. There are 2 fragments of LM II style lyre x and a wish bone handle. There are several obvious joins between this unit and Pail 30 L.4.

Pail 32 L.4: This pail also has several joins with Pail 30 L.4. The final ware has a relatively high proportion of decorated pieces. There are a few decorated MII sherd. There are several LM II style cup rims and body sherds. There is one lyre foot. Several objects are catalogued: bowl fragment (C-71), a cup fragment (C-72), a Cup fragment (C-79), a bell-shaped cup fragment (C-80). A fragment of (C-71) was also found on Pail 34 L.4. The latest sherds in style are LM II B/LM II. Catalogued cup C-73.

Pail 34 L.4: This pail also has a large proportion of decorated sherds. There are some obvious joins with other dumping pails. A fragment of (C-71) joins with another from Pail 32 L.4. There are some LM II designs and no obvious LM III A designs.

Pail 35 L.4: This unit appears to be predominantly LM II B in style. The rounded cup is the most popular decorated shape. The decoration includes lunates, running spirals, fish and foliate bands. There is no obvious LM III in this unit. The unit appears to be predominantly LM II B in style. The arm of a figure (C-74) and two cups (C-75, 76) are catalogued.

Continued on page 147
Pottery note: (the Dump cont.)

While digging, the dump appeared to be a coherent whole. The block pool with many sherds and bones continued from a level of Ca. 11.60 -10.60. This was confirmed by finding more sherds between pails 36 + 31, 36 + 32, 32 + 34. (Further finds might be expected.)

Vance Watrous carefully studied the pottery and concluded that there is little similarity between the pottery from our dump and the LM III A published by Stphan. These are some of numerous comparisons in the various accounts of LM III B, and many of the sherds (Ephesian goblet fragment and C82 for example) seem to be stylistically related to LM II.

On August 7, N. Coldstream visited the site and looked at some of the decorated sherds from the "Dump." His conclusion was that the material is predominately LM III B in style and post-Minoan style. That is, the designs are done in an LM III B tradition, but a bit differently. Some designs, he thought, such as C73 and C71, might be local styles. He thought C82 to be LM II.

Perhaps some of the questions raised by the dump will be answered when the excavation is extended to the area west of 2A2 in some future season.

SKETCH #2 Some decorated sherds from the dump.

Note: for a diagrammatic section of the Dump and location of the pails, see page 110.
9 August
Pail 54, level 3 (see page 154)
Under pail 53
Soil - same as 53.

We change pails as we near the supposed floor level. In the SW corner we find fragments of a cooking dish, flat on the floor. In the SE corner a heavy pole-bearing stone. See sketch opposite. Several baseball-sized water-worn stones on the floor, two of which at least are rubbers. The floor is defined by blocks, a hard pebbly surface, and clusters of baked clay. Stone tools: see Notebook 9 p. 5

Pail 54 L3: Laid on L2 with A/B. 1 much jar, 1 much jar, material indistinguishable cooking dish
Pail 55 L1

Under 50 and 24

Soil - Hard grey, stony, many sherds.

We take a few centimeters pass across the floor of room A1, as it appears that part of the floor deposit there remains. Pottery in pail 55 is limited. The most popular shapes are the kylix, cup/bowl.

Pail 56
(see page 154)
Under pail 552
Soil - somewhat softer, redder than pail 52.

After two 5 centimeter passes, we change pails for sake of security. A piece of pumice found this pail is within room D.

Wall 13 does not appear to bond with either wall 5 or 1

C 137 (?) 2A34/52

\(^{8}\) According to GWS, because of fallen blocks here, there may have been a column at this point.

(Plot 139)
Hall 57 = Hall 4, level 3
Under hall 57, level 2.
Soil - Red, with rocks.
This soil consists of a patch of earth in the SW corner of room A - see sketch. This soil is the earth and rubble above the floor level.
Hall 57 L. 3 (29 sherds) - The latest sherd is an LMIIIB style cup rim.

Hall 58 = Hall 5, L. 3
Under 57.
Soil - Reddish, soft.
This unit is the floor level in room A.
We find a large slab set on several smaller stones. Against wall 1, under two diagonally resting (?? fallen) stones, a LMIIIAB goblet foot was discovered, on the floor. The floor is defined by several slates.
Hall 58 L. 4 - the latest and only diagnostic sherd is a LMIIIAB goblet foot, catalogued (C179).

For plan - see excavation photos of well, see KO 230 (UADF Collection).
Pottery note, TR 2A2 Pail 54 L13

The latest pottery is LMIII A/B, there is a mendable cooking pot. There is also a substantial amount of earlier (MMIII LMII) material. There is a fragment from a hydria. The latest certain pieces are LMII A although two cup/bowl rims and a goblet foot could be LMIII B in style. Also there is a possible octopus style ovoid.

Work Description:

Trench 2A3, Room D

In the south part of 2A3 we began a new pail:

Pail 59 L4 = Pail 52 L4 under pail 50 L4 from depth of ca. 11.90 type of soil red-brown pottery: most sedrias LMII A, other: unenumerated.

After completing this pail, without finding the southern wall of Room D, we began a new pail:

Pail 63 L4 under pail 59 L4 from depth of ca. 11.75 type of soil red-brown pottery: p. 153 other: unenumerated.

In the N. part of 2A3, in Room D we excavated the floor level:

Pail 60 L4 under pail 56 L4 from depth of 11.80-11.70 type of soil reddish brown pottery: other: unenumerated.
Pottery note TR 2A3, pail 56 14:
The latest material is LM III B. There is a large amount of coarse and medium coarse ware. The base of a stand (possibly a snake tube) is catalogued EC 175. There is a noticeable amount of LM III/LM II style sherds.

Addition: Pail 60 14: All of the various levels of Pail 52, 56 + 60 14, 12. the soft grey clay above the floor probably represent continuous occupation in this room. The pottery, as well as the soil, is similar from one pail to the next. It contains a great amount of cooking ware. The latest material is LM III B, in all of these pails, C 215, a cup/pot is catalogued, also 319 (petrified cistum).

Pail 61 14: Smaller with pail 60. The latest material is LM III B. There is a mendable coarse vessel. Sherds from a pitcher are catalogued (C 217).

TR 2A2

In the former space between 2A and 2A2 we found a pithos sunked into the floor, covered with a flat stone. The pithos appears to be upended (ie its mouth at the bottom.) The mouth at the bottom was partially covered by a flat stone, and appears to be resting on other stones below. Inside the pithos we found 2 entire cups, a brazier, parts of other bowls, 2 pounding stones + some carbonized matter.
All of the material from inside the pithos has been placed in pail 62.

Pail 62 L 3
under pail from depth of type of soil
Pottery pij98
other
unventured.

This should be considered part of the floor deposit. Contained in pail 59. See sketch #1

Note: The area in TR 2A3
south of the apparent end of Wall 1 to the south edge of the trench and east of the aborted well to the E edge of 2A3 has not been completely excavated. It should be completed as soon as possible.

Photographs of pithos in entrance room.

Pail 62 L 3: Brayer & Conical cup, 2 bowls, catalogued (L209-213) Decorated material (very little) is MM. One cup fragment is LMI.

Pail 63 L 3: This unit is mixed. There are a couple of sherds each of MM, LMI, & MM III styles. Ca. 75 sherd s.
Today, in addition to general cleaning up for photographic tomorrow, we excavated the sandy, earth, and rubble from the west side of Wall 5 in Trench 2 K 3. This revealed a series of 3 stepped terracing walls along the entire preserved length of Wall 5 (Sketch #1 p 160). All of the pottery from this area was put in Pool 64 L 11 under pool from depth of surface type of soil: dry grey + sandy + rubble

Pottery other

Inventoried:
Pool 64 L 11: This unit is mixed in Res. - Len. TR A.
